

COVID 19

TAXI Transportation

Movement of two passengers, plus the driver, is allowed in TAXI vehicles according to the new prevention measures for the spread of the coronary artery in our country. In case of transport of a person who needs help or in case of minor children the number may increase of passengers.

Passenger Obligations

1. Use of mask

The use of a mask is mandatory for everyone, as it contributes to reducing the spread of Covid-19. Not using a mask is against the law but also against our policy. In case of control, a fine can be imposed on both sides, passenger, and driver

2. Boarding in the back seat of the vehicle

Once the taxi arrives, the passenger sits in the back seat to minimize contact with the driver.

3. Contactless Payment

It is advisable to make the payment by card, without touching the poses located in each vehicle so that there is no contact with both the driver and cash.

COVID 19

For the safety of all of us,
all the necessary measures are taken by us

1. Masks and antiseptics

All car drivers are equipped with cloth masks, for their personal use, as well as with disposable masks so that they can give them to the passenger when he does not have his own. The use of the mask is mandatory for both (for all when they fall in special cases). Along with the masks there are antiseptics for the hands for use by both drivers and passengers

2. Continuous cleaning and disinfection of vehicles

To reduce the transmission of the virus, our vehicles are washed daily and regularly disinfected

3. Drivers

Drivers are in constant communication, so they are informed about the virus and the changes in the provisions of the law, inside and outside of Greece.

4. Cab dividers in vehicles

Several of the cooperating vehicles have installed a special divider, with the number of them increases every day.
